# NRC: A Data Based Assessment of Research Doctorate Programs

Stephanie Schmitt
Associate Dean, Graduate School

August 25-26, 2010

### What is the NRC Assessment?

- A study to assess the quality <u>and</u> <u>characteristics</u> of research doctorate programs at institutions in the US
  - The last NRC rankings were provided in 1995
  - Methodology used in this study is quite different and more robust
- 212 institutions participating
  - Data for 4,838 PhD programs in 62 fields

# **UNC-CH Participation**

- UNC-Chapel Hill has 53 programs participating in the NRC study
  - Programs fairly evenly split among the disciplines
    - arts and humanities, life sciences, physical sciences, mathematics and engineering, and the social and behavioral sciences
- Base year for analysis/reporting was AY 2005-06
  - The ratings and data will be 'dated'

### Timeline

- Methodology guide released in July 2009
- OIRA reviewed the guide as well as our campus data to generate basic analyses
  - Early July each participating doctoral program received a report with their data and some AAU peer comparison data

## Timeline

- Target release of ratings data and results
  - Monday, September 20 embargoed release
  - Tuesday, September 28 final report, spreadsheets, analytic tables, and methodology guide released; national briefing and teleconference

### Results

- The NRC results will provide for each program two overall ranges of rankings, as well as ranges of rankings for sub-categories for the areas of Research Activity of Program Faculty, Student Support and Outcomes, and Diversity of the Academic Environment.
- Programs will identify variables that make the largest contribution to the overall rating or dimension and compare their data to that of similar programs

# Results – Ranges of Rankings

#### **Two Approaches**

- Asked a sample of faculty in each field how they would rate a sample of programs.
   Related those ratings to 20 program characteristics through a regression (Rweights).
- Asked faculty what they thought was important to the quality of a doctoral program and developed weights (Sweights).

## A Sample Comparison

R and S-based	Rankings	for 5	<b>Programs</b>	in a Field

17 0110	basea Itali	itinge iei e i	rogramme m	<b>u</b> : 101 <b>u</b>	
Institution Name	R5	R95	<b>S</b> 5	S95	
Institution A	4	17	10	29	
Institution B	4	27	3	10	
Institution C	13	37	8	23	
Institution D	31	79	31	86	
Institution E	52	102	91	150	

# Dimensional Rankings for the Same Programs

Institution Name	RA5	RA95	SS5	SS95	D5	D95
Institution A	7	29	9	66	81	131
Institution B	3	12	31	110	97	147
Institution C	9	39	6	42	101	151
Institution D	21	85	21	93	42	97
Institution E	53	124	53	133	77	128

# The Twenty Key Variables used in the Rankings

- Publications per allocated faculty
- Citations (exc. Humanities) per publication
- Percent faculty with grants
- Awards per faculty
- Percent 1<sup>st</sup> Yr. Full Support
- Percent Completing in 6 yrs. or less (8 yrs. for humanities)
- Median Time to degree
- Students with Academic Plans
- Collects Outcomes data

- Percent Faculty Minority
- Percent Faculty Female
- Percent Students Minority
- Percent Students Female
- Percent Students
   International
- Percent Interdisciplinary
- Average GRE-Q
- Number of PhDs 2002-2006
- Student Workspace
- Student Health Insurance
- Student Activities

### Outcomes

- 1. The data will help to determine where improvement is needed and which variables to focus on.
- Identify variables rated most important by faculty in the field. These variables had the greatest effect on the range of ratings for each program.
- 3. Compare your program with those at other institutions on variables of interest. These values will be available in an online database.

# Communications and Help

- The Graduate School, Institutional Research, and University Relations are working closely on talking points.
- The campus NRC listserv will be used to communicate in the coming months.
- The campus NRC website will be updated frequently:

gradschool.unc.edu/policies/nrc/
